Installation Instructions for Mirror

Tool required

Pencil
Drill and suitable drill bits
Suitable screw driver
Measuring tape
Spirit level

Contents

Mirror
Wall mounting fixings
Instructions

Installation

Choose where you wish to install the mirror. Make sure that there are no hidden electrical cables or pipes in the wall. If there are cables or pipes, mark their position to prevent damaging them. When installed, your mirror should be positioned at a height that best serves your need.

This product is supplied with wall mounting fixings. If your mirror is being installed in a location where it is not suitable to use this type of screw and insert, you should check with a building supply or hardware store for the correct type of fixings to use for your wall type.

Hold the mirror against the wall in the location that you wish final installation to be. Following the edge of the mirror, draw a faint line down one edge and along the bottom of the mirror (it is advisable to use a pencil or similar, so that the lines can be easily removed once installation is complete). Measure from the edge and bottom of the mirror to the centre of the two fixing brackets on the back of the mirror and transfer these measurement onto the wall so that there are two marks (showing the centre of the fixing brackets) on the wall where holes need to be drilled.

Drill two holes using a suitable size and type drill bit. Push the plastic inserts into the holes and screw in the wall mounting fixings. Fit the mirror onto the wall by locating the wall mounting fixings into the fixing brackets on the back of the mirror.

Care & Cleaning

- Do not use abrasives or solvents when cleaning this product.
- Wipe off all water spillages as soon as possible using a soft, damp cloth.
