BL_BRACKC Slide rail bracket

SH974C Shower hose

BLHANDSET Handset

57BLSP013 Belgravia ceramic ring

57BLSP014 Grub screw for thermos ha

RS027CR Inlet covers

57KAISP002 Thermostatic cartridge

CLEANING

The chrome plate we use on our taps is very durable, nevertheless care should be taken when cleaning them. They should be cleaned only with warm soapy water followed by rinsing with clean water and drying with a soft cloth. All finishes are vulnerable to acid attack and some strong substances such as household cleaners, disinfectants, denture cleaners, hair dyes can cause damage to the surface.

THE QUALIFICATIONS

This product should only be fitted by a qualified plumber to NVQ (National Vocational Qualification) or SNVQ (Scottish National Vocational Qualification) Level 3. Should the installation be completed by a non-qualified person then the guarantee may be considered invalid.

For a claim made under our warranty written certification of your installers credentials can be required. For further information or to find a qualified installer in your area please visit the Institute of Plumbers website - www.iphe.org.uk

At present, to be a plumber you need to follow the National Vocational Qualification (NVQ) route (Scottish National Vocational Qualification - SNVQ - in Scotland). These qualifications are made up of theory and practical work in the classroom/purpose built training facility and work based experience with a working plumber. Colleges should help students find a work placement, although many students organise it themselves. The S/NVQ qualification works in levels. All recently qualified plumbers should hold S/NVQ Level 2 as basic with Level 3 as the preferred level. Level 2 will give you the foundation you need for a career in plumbing and teach you domestic plumbing to a satisfactory level. Level 3 is more comprehensive and deals with domestic, commercial and industrial plumbing along with aspects such as gas - if you want to one day set up your own business, this is the level to reach. The Institute of Plumbing and Heating Engineering, and the industry as a whole recommends that all plumbers reach a minimum of Level 3.

Reaching Level 3 has other advantages. The Institute runs a Master Plumber Certificate, which only those attaining Level 3 or equivalent can reach as long as they have the relevant experience as well. Those with S/NVQ Level 3 can (once in membership with the Institute for five years as a Member MIPHE) gain Engineering Technician EngTech status with the Engineering Council (UK).

INSTALLATION
INSTRUCTIONS

**Riser Only for Shower
Height 900 mm**

INTRODUCTION

Please read these instructions carefully and keep in a safe place for future reference.

General Installation Guide

This guide contains all the necessary fitting information for the stop cock. Please read all the instructions carefully before beginning the installation. Care taken during the installation will ensure long life and trouble free operations from the stop cock.

PARTS LIST

The set comprises of the following. Check that all parts are present.

Fig. 1

INSTALLATION

First shut off your water heating system then, with your mains stop cock closed, open the lowest hot and cold taps in the house and allow to run until the cold storage tank and pipes are empty (the hot water storage cylinder always remains full). Fitting isolating valves to the inlet feeds is recommended for ease of maintenance.

Fig. 2

INSTALLATION

Remember to turn off the mains water supply before connecting to any existing pipe work.

- Identify all components before fitting;
- Check dimensions in Fig. 2;
- Use all components provided to install the riser into the wall and the mixer as seen in Fig. 3 and Fig. 4; Use thread seal tape on the shower arm thread;
- Turn on both hot and cold water supplies;
- To check for joint and connection leaks, turn on the water supplies and open both taps letting the water flow for a few minutes;
- Remedy if required.

INSTALLATION
INSTRUCTIONS**Slide Rail Bracket**

INTRODUCTION

Please read these instructions carefully and keep in a safe place for future reference.

General Installation Guide

This guide contains all the necessary fitting information for the stop cock. Please read all the instructions carefully before beginning the installation. Care taken during the installation will ensure long life and trouble free operations from the stop cock.

PARTS LIST

The set comprises of the following. Check that all parts are present.

Fig. 1

INSTALLATION

- Identify all components before fitting;
- Remove the joint from the rail with a key;
- Remove the nut;
- Place the slide rail into the riser;
- Put the rubber ring in the slide rail and tighten the handset support into it;
- Insert handwheel in the rail and tighten it until it is properly secured.

- To adjust the slide rail, release it with the handwheel, and tighten it again when you select the correct position;
- Check if O-ring in the joint is not damaged. Replace if necessary;
- Insert nut and tighten the joint back into the riser.
- To check for joint and leaks, turn on the water supplies and open both taps letting the water flow for a few minutes;
- Remedy if necessary.
