

1. Measure distance required between the wall and the outside of the glass panel to be fitted (A)
2. With the unit loosely assembled and each end pushed fully in, offer the unit inbetween the glass and the wall to ensure the glass is plumb, the arm is level and square to the glass and wall.
3. Mark on the wall the location for the mounting hole (H)
4. Attach the wall bracket through hole (H) using appropriate fixing methods for the wall used.
5. Re-assemble everything and tighten all grub screws to the glass, wall bracket and arm joint.
6. Test all joints for tightness before use.
