

AFTERCARE INSTRUCTIONS

Your fitting has a high quality finish and should be treated with care to preserve the visible surfaces.

All surface finishes will wear if not cleaned correctly, the only safe way to clean your mixer is to wipe with a soft damp cloth. Stains can be removed using washing up liquid. All bath cleaning powders and liquids will damage the surface of your fitting, even the non-scratch cleaners. **NOTE: Never use abrasive detergents or disinfectants or those containing alcohol, hydrochloric acid or phosphoric acid.**

Bristan recommend E-Cloth for cleaning all of our bathroom & kitchen products. Using just water, E-cloth gives a smear free, deep clean by breaking up and holding dirt, which normal cloths leave behind. Order through your Bristan stockist. (ORDER CODE: ECLOTH)

GUARANTEE

All products are manufactured to the highest standards and a 5 year guarantee covers any defect in manufacture.

NOTE: The 5-year guarantee on the cartridge is invalidated if damaged by any waterborne debris.

NOTE: All products must have access for servicing or replacement during the life of the product.

In the interests of continuous product development we reserve the right to alter specification as necessary

BRISTAN

Single Flow Monobloc Sink Mixer

Fitting Instructions & Contents List

Before starting any installation project, consider 'safety' first. Look for the 'safety note' and read the safety advice.

Please keep these instructions for future reference and request of replacement part

WATER PRESSURE

This mixer is suitable for use at all supply pressures. However for optimum use both the hot and cold supplies should be reasonably balanced.

Operating Pressures: Min 0.2 bar, Max 7.0 bar.

If the fitting is installed at low pressure (tank fed), then the minimum distance from the highest installed position of the shower head to the underside of the cold tank should be 2.0 metres to ensure adequate shower performance.

This mixer should be installed in compliance with the Water Regulations. Where the supplies are unbalanced, i.e. hot water from cylinder tank / cold from the mains, approved check valves must be fitted in the supply pipes.

For further details contact your Local Water Authority.

IMPORTANT - PLEASE READ

This fitting needs to be installed in accordance with the following Installation Requirements and Notes (IRN) to ensure they meet the requirements of the Water Supply (Water Fittings) Regulations 1999 and the Scottish Byelaws 2004.

IRN R001

See text of entry for Installation Requirements or Notes.

IRN R006

This tap or combination tap assembly has a Type AUK3 air gap and is therefore for installation in any premises to protect against a backflow risk up to a Fluid Category 5.

IRN R010

Schedule 2-15 (1)

Water supplies shall be at reasonably balanced pressures from a common source (e.g. hot and cold supplies both from the same storage or both from a supply pipe). Where the fitting is supplied from unbalanced supplies (e.g. hot and cold supplies from separate sources) a **'Listed' single check valve** or some other no less effective backflow prevention device shall be fitted immediately upstream of both hot and cold water inlets.

INSTALLATION

1. Identify all components and check for completeness, particularly before commencing installation.
2. Fit the mixer body to the basin/bidet using the 'C' plate fixing kit. The full rubber washer goes between the fitting and the basin/bidet, and the 'C' shaped rubber and metal washers on the underside of the basin/bidet, to be secured by the nut and the threaded rod.
3. Fit the tail pipes to the fitting and connect the hot and cold supplies. **DO NOT OVERTIGHTEN.** Soft copper tails can be carefully bent and cut to length to meet supply pipes.
4. Fully open both valves, letting them run for a few minutes to flush out the system and check all joints and connections for leaks.
5. See back the page for aftercare instructions.

MAINTENANCE

If the fitting begins to drip:-

1. Turn off the water supply.
2. Remove fitting head and valve.
3. Carefully clean seating and rubber washer.
4. Replace valve and turn on the water supply.
5. Contact our helpline if problem persists.

IMPORTANT: If fitting a replacement spout, please ensure that the split locking collar (14) is located in the top groove of the replacement spout.
