

Washbasin mixer - With click clack waste

DE111DPC

INTRODUCTION

DIMENSIONS

DE111DPC

Please read these instructions carefully and keep in a safe place for future reference.

General Installation Requirements

The installation must comply with regulations of the Local Water Authority as contained in their bylaws. All of the taps in this range are double flow (the hot and cold water are separated) and should therefore be supplied with hot and cold water at balanced pressures, both from the tank or both from the mains (via a combination boiler for example). If the taps are not supplied at balanced pressures then the tap will not function correctly. It will also be necessary to fit non-return valves on both hot and cold feeds. It is very important that all pipe work is flushed thoroughly after installation to avoid damaging the ceramic disc.

Standard specifications

1. Recommended working pressure:1 Bar
2. Maximum test pressure:5 Bar
3. Maximum hot water temperature : 80°C
4. We recommend installing filters to this product.
5. Warning :
 - if the above mentioned conditions (see points 1,2,3,4) are not observed, the product may not correctly work or not work at all.
 - On receipt of this product the chrome finish must be checked for blemishes. Defects notified after fitting may be regarded as damage resulting from the installation process, incorrect maintenance or misuse and as a result not be claimable under the warranty.

Approvals

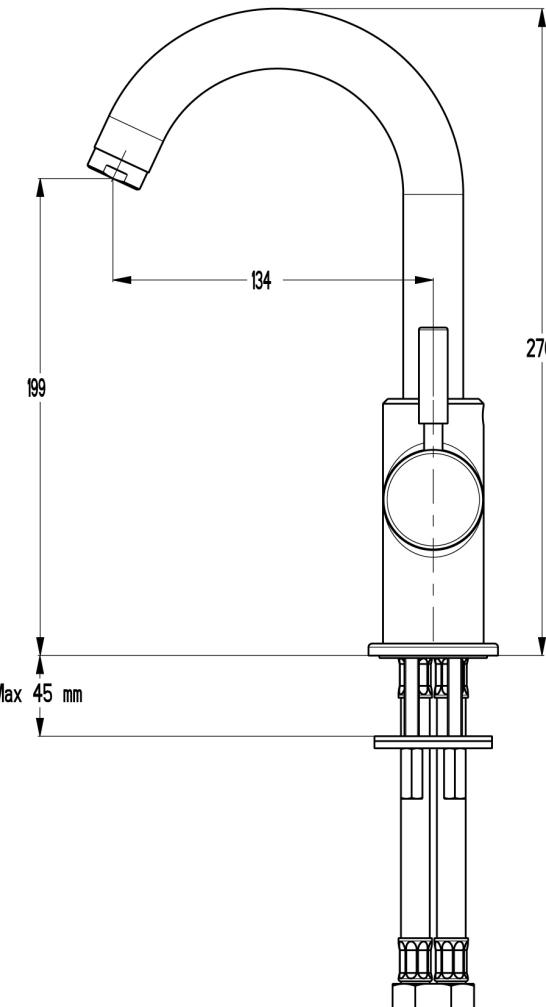

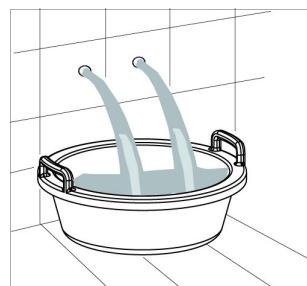

All products are manufactured using materials tested and approved under the Water Bylaws Scheme and comply with requirements of British Standard 5412:1996 where applicable.

Preparation and bylaw requirements

These taps are double flow. Water bylaws require that where the hot water is supplied from a tank and cold from the mains, non return valves are fitted on both hot and cold pipes as close as possible to the tap. These are not supplied. Where combination boilers are fitted it is only necessary to shut off the incoming mains and turn the boiler off and non return valves are not required.

WARNING

- Installation Performed By Qualified Personnel Only !
- Clean Carefully The Water Pipes Before Installing The Tap.

Note: all dimensions in millimetres

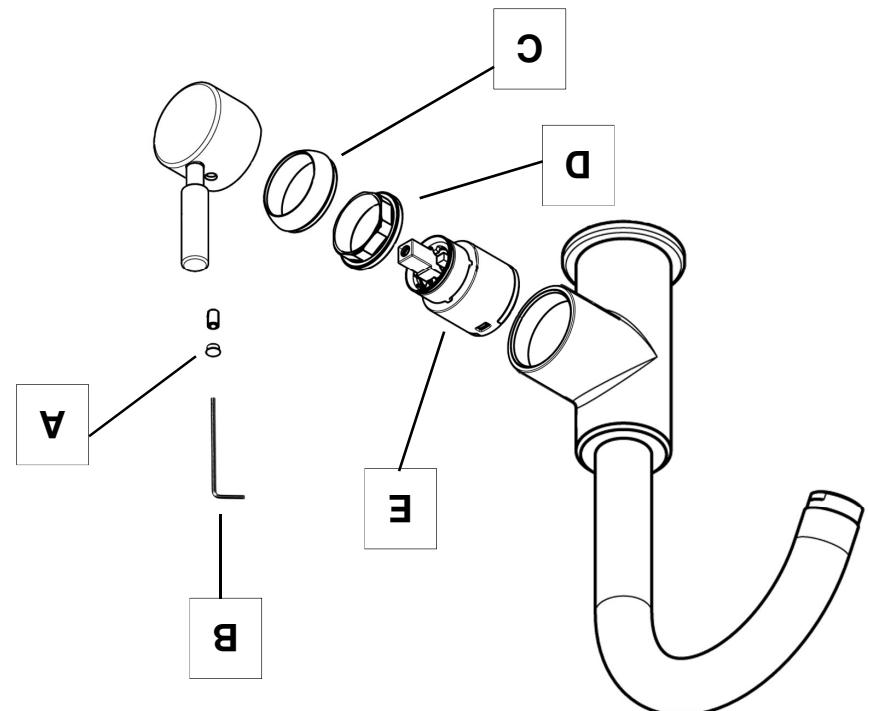

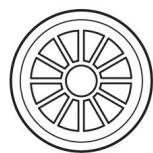

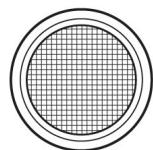

The concealed cartridge should give trouble free service, but in the event of any problems, servicing is straightforward. First shut off the water supply to the tap. Pull out the cap (A) from the handle and with an allen key (B) loosen the grub screw in handle, but do not remove it. Take off the handle. Wash the cartridge with clean running water carefully using a correct size spanner unscrew the retaining nut (D) and remove the cartridge (E). Wash the cartridge with cleaner debris have been removed. Dry and make sure that any trapped debris have been removed. Dry and replace the cartridge, retighten nut, cartridge cover followed by the handle.

CLEANING THE CARTRIDGE

The chrome plate we use on our taps is very durable, nevertheless care should be taken when cleaning them. They should be cleaned only with warm soapy water followed by rinsing with clean water and drying with a soft cloth. All finishes are vulnerable to acid attack and some strong substances such as household cleaners, disinfectants, denture cleaners, hair dyes, wine making and photographic chemicals can cause the surface to go black or peel.

AERATOR
(not included in the package)
A
FLOW STRAIGHTENER
B
MIXER NOZZLES (Option)

CLEANING

Maintenance

DE11DPG

- Connect the flex tails (1) to the water system.
- To position correctly the mixer onto the basin.
- Tighten the nuts (7) on the threaded fittings (2) having care screws (2).
- Working below the basin, insert the hole from above the basin, making the flex tails passing through first.
- Then, insert the mixer in the hole from above the basin, the seal (3) under the base of the mixer (4).
- Screw the threaded screws (2) into the body mixer, insert care to tighten well.
- Screw up the two flex tails (1) to the mixer body, taking hole according to UNI EN 31 law (35mm +2/-1).
- Firstly Verify that your basin is provided with a standard

Flush the piping with plenty of water prior to installation. Remember to turn off the mains water supply before connecting to any existing pipe work.

Fitting isolating valves to the inlet feeds is recommended for ease of maintenance. Where combination boilers are fitted it is only necessary to turn off the boiler and shut off the incoming mains. Pipes are empty (the hot water storage cylinder always remains full).

First shut off your water heating system then, with you remains stopcock closed, open
