# Geberit AquaClean Mera

A masterpiece of function and design.

The Geberit AquaClean Mera complete solution takes the comfort and convenience of a shower toilet to a whole new level. Its sophisticated technology and stylish design complement each other perfectly, so cleaning with water will simply become a matter of course. Designed by Christoph Behling, the new shower toilet from Geberit blends harmoniously into any bathroom environment.

In fact, this shower toilet will never cease to amaze you, no matter how many times you use it. The Geberit AquaClean Mera is characterised by high-quality materials, smooth lines and seamless transitions. The chrome surfaces on the design cover create an impression of floating, accentuated by the play of reflections. As for its sophisticated technology, this shower toilet doesn't reveal much at first glance: all of the power and water supply connections are incorporated into the housing. On the inside, however, the Geberit AquaClean Mera is filled to the brim with revolutionary technology. This product is the first to feature the patented WhirlSpray shower technology.

Another highlight is the rimless ceramic pan with its distinctive asymmetrical inner geometry. This provides the basis for the innovative TurboFlush technology, which enables the toilet to be flushed out extremely thoroughly yet quietly.

The hybrid warm water system, which consists of a combination of a continuous flow heater and a storage water heater, provides an immediate and continuous supply of water at body temperature.

Additional functions such as a discreet light for orientation at night, a WC lid that opens and closes automatically, a WC seat made of high-quality duroplast with a fast-activating WC-seat heating system and odour extraction round off this product's convenient features.

The Geberit AquaClean Mera truly is a masterpiece of function and design.

← The Geberit AquaClean Mera is available with a white or chrome-plated design cover.

## Well-being

How does it work? Simple!

**WhirlSpray shower technology**  
The patented WhirlSpray shower technology, used here for the first time, features two nozzles and ensures an extremely targeted and thorough clean. This is made possible by a pulsating shower spray that is enhanced by dynamic aeration. The benefits are impressive: a more efficient clean and a pleasant shower experience with reduced water consumption.

**TurboFlush technology**  
The innovative TurboFlush technology, combined with the asymmetrical inner geometry of the rimless ceramic pan developed by Geberit, enables the toilet to be flushed out extremely thoroughly and quietly. A single water release point with optimal flush water flow guidance. The high-quality ceramic pan is finished with a special surface coating to prevent any build-up of dirt. Inaccessible areas are kept to a minimum, while edges and corners have been dispensed with completely.

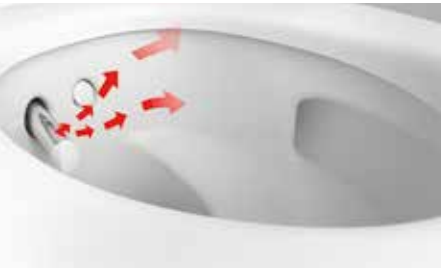

**Remote control**  
The remote control has a clear display and sits comfortably in your hand. All the input can be entered with just one hand, and all it takes is a click of a button to call up your personal water temperature, spray intensity and spray arm position settings. You can check other profile settings using the display on the back of the remote control and change them via a menu.

- 1 Remote control
- 2 Touchless automatic mechanism for the WC lid
- 3 WhirlSpray shower technology
- 4 Lady wash
- 5 Dryer
- 6 WC-seat heating
- 7 TurboFlush technology
- 8 Odour extraction
- 9 Orientation light

**Lady wash**  
The separate lady wash offers a particularly gentle shower spray. Its nozzle is integrated into the spray arm, keeping it hygienically clean even when not in use.

**Dryer**  
The dryer arm extends independently from the spray arm and automatically aligns itself with the position of the spray to ensure an optimal drying performance. The intelligent dryer functionality takes into account the change in the skin's sensitivity to heat as it dries.

**Odour extraction**  
Automatically activated, low-noise odour extraction eliminates unpleasant odours right where they come from: in the ceramic pan. The air in the ceramic pan is purified by a long-lasting ceramic honeycomb filter.
